## SUMMARY

I am an Experienced Software Engineer, skilled in app development Familiar with SDLC (waterfall & Agile) Love to Code in C#, Java, Python , and Matlab I Have so much interest in Engineering and Science.

## EDUCATIONS

|                                                         |                         |                       |
|---------------------------------------------------------|-------------------------|-----------------------|
| Bachelor of Engineering - Institut Teknologi Kalimantan | Balikpapan, East Borneo | Aug 2017<br>Graduated |
|---------------------------------------------------------|-------------------------|-----------------------|

## PROFESSIONAL SKILLS

|                                                           |
|-----------------------------------------------------------|
| C#, Java, Python, R, Node. JS, Matlab                     |
| Asp .Net, Webform, MVC, .Net Core, Springboot, Maven      |
| REST API, GRPC, SOAP                                      |
| SQL Server, Postgres SQL, MongoDB                         |
| Tableau, Google Data Studio, Tableau Server, Tableau Prep |
| Katalon, Selenium, JMeter                                 |
| GIT, Docker, AWS, Jenkins, JIRA, Confluence               |

## EXPERIENCES

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>VLink Consulting</b><br>Senior Software Engineer in Bank Mandiri <ul style="list-style-type: none"><li>Optimized payout settlement batch scheduler, reducing processing time from &gt;1 hour to under ~1 minute for ~155,000 records by resolving bottlenecks and improving query efficiency.</li><li>Developed multi-outlet, multi-account registration feature, enabling merchants to manage multiple outlets with distinct bank account linkages.</li><li>Enhanced code quality and maintainability by resolving SonarQube issues in alignment with internal engineering standards.</li><li>Delivered enhancements to inventory, catalog, and promotion systems across POS, webstore, and kiosk platforms.</li><li>Reverse-engineered complex legacy pricing logic to enable implementation of new promotion and inventory features aligned with evolving business requirements.</li><li>Led backend development for POS payment revamp, coordinating system integration and improving payment processing reliability.</li></ul> <b>Tech Stack:</b> .NET 8, C#, Java, Maven, SQL Server, PostgreSQL, GRPC, Rest, Kafka, Redis, ASP.NET Web Forms | <b>May 2025 - May 2026</b> |
